

WordFinder 9 Professional

Find the right word - quickly and effortlessly, without going to a bookshelf!

WordFinder is a simple and fast way to always finding the right word or phrase when you read or write documents.

WordFinder can be used together with all types of applications such as

- word processors
- web browsers
- mail applications

All you need do is highlight a word in the document you are working on and WordFinder will look it up for you. The whole process takes only a fraction of a second. You often will be able to choose from a selection of alternative translations in the form of words, phrases and synonyms. The translated item that you have selected can simply be pasted directly into your document by pressing down a key. WordFinder will soon become a natural part of your writing.

Search character by character or in a complete text

It is easy to carry out advanced searches in WordFinder; the process is a lot faster and much easier than looking through a printed dictionary. The use of wild cards (searches including * and ?) makes it possible to execute advanced searches, for the beginning or ending of a word, for example. If you want to know how to translate a word or a phrase, you can employ the article search feature. If you are interested in finding out more about the nuances of a language, WordFinder is equipped with an intelligent search engine that is capable of providing more detailed information. A simple right-click on your mouse will give you access to the translation in the opposite direction.

Combine several dictionaries or create your very own

You can choose from more than 110 different dictionaries of different types, in various different languages, which have been designed for use with WordFinder. And, you can always add more dictionaries if and when the occasion arises. For instance, if you have several Swedish-English dictionaries they can be grouped very easily, if you wish. You also have the option to add alternative definitions for words or usable phrases by adding your own notes to the WordFinder dictionary. It is also possible to create your own corporate-specific or genre-specific dictionaries. You can also add trade or business expressions, explanatory illustrations, drawings and descriptions. You can even customise your own dictionaries to suit your particular requirements. WordFinder Image Professional is an advanced imaging module and the WordFinder Developer Kit is a developer module for people who want to create their own dictionaries with thousands of words and illustrations.

Only your imagination sets the limit for WordFinder!
